

**SPENCER FXA**

Leg immobiliser

This innovative and advanced product can be placed at the fore-front of rescuing techniques, allowing maximum assistance to the poly-traumatised patient by minimising the risk of movement. The FXA interacts with the straps keeping the lower body in a steady position secured to the spineboard, and completing in this way the immobilisation cycle.

The Spencer FXA ensures firm support of the lower body when fixed to **any type of spinal board**.

During emergency rescue it is paramount that there is no loss of time, so that patients can be treated with efficiency and accuracy. For this reason the FXA is light, easy to handle and above all totally antiseptic. The FXA is fully sealed and resistant to blood and other fluids. Made of liquid repellent **easy clean** material, any spreading of infection is prevented.

The FXA is X-Ray translucent and compatible with CAT and RMN examinations.

Again for practical reasons and convenience, the leg immobiliser is of **bright hi-visibility** red colour and can be personalised with your name and logo.

**FXA LEG IMMOBILISER****CODE SH00150A**
