

PEDI-LOC

Combines cervical stabilization with a restraining transport device

Designed for children up to 65 pounds and 25" to 48" in length. Adjustable shoulder, chest and abdominal straps are fastened with Velcro to facilitate convenient monitoring of a child's cardiac and respiratory systems. Velcro fastened leg and ankle straps offer separate treatment and immobilization of legs. Large ear holes in the vinyl-coated Pedi Fix permit visual monitoring for possible bleeding and fluid drainage. The Pedi Fix and head straps are easily adjusted to provide maximum patient stabilization and comfort. The interior five-ply birch board is marine coated so its surface will not absorb blood or other body fluids. The board is radiolucent for convenient use in x-rays. A layer of closed-cell foam laminated to the board provides neutral alignment of the cervical spine and adds to patient comfort. In addition, the foam will not absorb blood or body fluids so it's easy to maintain and clean. The Cordura™ 500 denier cover is Scotch Guardedref for easy cleaning after use. Velcro® fasteners make the cover easy to remove for machine washing. Six hand holds make lifting and transport easy.
